PRODUCT GUIDE

SmartBrake GripAdapt

GripAdapt uses simple wedges to tilt the brake lever closer to the handlebar. It is ideal for children or adults who find standard brake levers difficult to reach.

Compatible with **Magura HS11**. Contact SmartGroup about other brake levers.

Reduces the distance to the lever by **10-30 mm**, depending on the setup.

Wedges change the angle of the brake lever.

Examples of the distance between the lever and the handlebar.
